Themes and Focus Areas

Interior Design

The theme focus is Sustainable Systems for Living & Universal Design. Key topics for potential lectures and workshops include:

Greening & Universal Design: Showcasing thoughtful, small-scale interventions that transform abandoned areas. This combines the greening of urban spaces (rooftops, courtyards) with Universal Design principles to create accessible, aesthetic, and community-oriented environments.

Modular Innovation: Featuring breakthrough modular solutions for interiors and public spaces (furniture, urban equipment), with an emphasis on Design for All and the innovative use of sustainable, locally sourced materials.

The Tiny House Revolution: Critical discussions on pilot projects for small, sustainable housing units, exploring a new culture of living that champions mobility, energy efficiency, and community sharing.

Visual Communications

The theme focus is Visual Commentary & Nature-Inspired Design. Key topics for potential lectures and workshops include:

Patterns of Nature in Design & Biophilia/Biomimetics: Exploring sustainable visual communication and utilizing patterns of nature (Biomimetika) in design.

Socially Engaged Design: The role of visual communication (e.g., posters, digital media) as a powerful tool for social connection, identity, and engagement on challenging topics like climate change and social inclusion.

Fashion And Textiles

The theme focus is Circular Fashion and Textile Innovations. Key topics for potential lectures and workshops include:

Sustainable and Bio-Based Textiles: Investigation into materials from renewable sources, recycled fibres, or biopolymers, and sustainable textile processing approaches such as natural dyeing and printing. The focus is on next-generation innovative materials that reduce the environmental footprint.

Reuse and Garment/Textile Upcycling: Strategies for upcycling, redesigning, and extending the lifecycle of garments through circular models and zero-waste approaches, and experimentation with surplus textiles for transformation into sustainable, modular products.

Zero-Waste Pattern Making and Digital Approaches: Cutting and design techniques that prevent waste generation, including experimentation with modular garments and the use of 3D design and AI for efficiency.

Design Management

The theme focus is Strategic Design Management for Sustainable Mobility. Key topics for potential lectures and workshops include:

Design Management Approach to Sustainable Mobility: Integrating user-centered research, sustainability, and innovation. Exploring the potential of electric mobility through the lenses of modularity, personalization, and ecological responsibility, focusing on the diverse needs of future users. By combining research, design, and strategic thinking, the project aims to deliver conceptual proposals that offer a fresh and forward-looking perspective on sustainable mobility and the evolving role of electric vehicles in modern society.
